

FLEXX
MORE MILES. LESS FUEL

Simplified EQUAL FLEXX Explanation

FLEXX is the only **internal** ADAPTIVE wheel-end balancer that can ensure the footprint of the tire is always making maximum contact with the road.

Because

FLEXX corrects imbalances **PLUS** absorbs the vibrations that are caused from changing load, speed, and road conditions by distributing weight at the footprint immediately and for the life of the tire.

Neither static nor dynamic balance can adapt or respond to load, speed, and road changes at the footprint.
