BUILDING A SUCCESSFUL ALIGNMENT PROGRAM FOR YOUR AUTOMOTIVE CENTER STARTS WITH THE RIGHT EQUIPMENT.

RAVAmerica TD 2.0 SmartAligner

Unmatched versatility, portability, speed, and precision.

FOR ANY AUTO REPAIR CENTER WHERE SPACE, EFFICIENCY, AND PROFITABILITY ARE IMPORTANT.

General Automotive Repair Shops

INTEGRATION is KEY...

- And your alignment success depends on your alignment equipment's ability to fully integrate with your work flow without interfering with your core business.
- Modern equipment should be extremely versatile and portable and able to work all over the workshop.

Nothing is gained if workflow efficiency suffers and your core business is negatively impacted.

CONVENTIONAL EQUIPMENT...

- Utilizes processes from a slower paced and bygone era.
- Their equipment requires you to modify your proven practices so that they conform to their operating process.
- Modern equipment flexes to adapt to your workflow process.

Allows your lube and tire techs to proficiently perform alignment service.

20th CENTURY APPROACH...

- An alignment bay or station must be dedicated.
- The vehicle must be brought to the alignment station.
- An alignment specialist does all alignment work.

Our aligner has the versatility and portability to be used all over the workshop. Take it to the vehicle! Its simplicity of operation allows more techs to become involved.

THE MODERN PROCESS...

- The RAV alignment system goes to the vehicle...no matter which bay or which lift is being used.
- The tech that has installed the tires or done the lube services should also perform the alignment service.

Nothing works well unless it fits.

RAVAmerica TD 2.0 SmartAligner

RULE 1 — TAKE THE ALIGNER TO THE VEHICLE...NOT THE OTHER WAY AROUND.

ALIGNMENT OFF EXISTING 2 POST LIFTS

TAKING THE ALIGNER TO THE VEHICLE

ALIGNMENT OFF SCISSOR OR PIT LIFTS

TAKING THE ALIGNER TO THE VEHICLE

ALIGNMENT OVER THE PIT

TAKING THE ALIGNER TO THE VEHICLE

ALIGNMENT OFF THE DRIVE ON LIFT
